S
subsidiaries colleciveCly the “Group”, Hong Kong stock code: 757, Taiwan stock code: 9157.TT) is a leading manufacturer of monocrystalline silicon solar ingots and wafers in the People’s Republic of China (the “PRC”). Its products are used for the manufacture of photovoltaic cells which are important components of solar energy generation systems.

During the period under review, the Group was engaged in fveC main businesses:

(a) the manufacturing and sales of monocrystalline and multicrystalline silicon solar ingots and wafers;

(b) the processing of silicon solar ingots and wafers;

(c) the upgrading and trading of polysilicon;

(d) the production and sales of photovoltaic cells and modules; and

(e) the design and installation of photovoltaic systems.

Currently, our integrated business model includes monocrystalline silicon solar ingot production with annual capacity of approximately 800MW, monocrystalline silicon solar wafer production with annual capacity of approximately 600MW, as well as photovoltaic cells and modules productions with annual capacity of approximately 300MW and 100MW, respeciveCly. In addition, the Group operates polysilicon reclaiming and upgrading facilities in Shanghai and Jinzhou.

Upon the completion of the 400MW monocrystalline silicon solar ingot production line in Xining as well as the 500MW multicrystalline silicon solar ingot and wafer production plant in Jinzhou, Solargiga will moeC a step closer to be the world’s largest monocrystalline silicon solar ingot and wafer producer as well as one of the key players in multicrystalline silicon solar product business through rapid capacity expansion and technology upgrade. The Group also extended its business gradually to downstream photovoltaic cell, module and system installation businesses to realise full vertical integration in photovoltaic industry.

Management Discussion and Analysis
管理層討論及分析

Market Overview

After rapid growth in 2010, the global market demand for solar energy has slowed down since the second quarter of this year. Although energy conservation and emissions reduction as well as the development of clean energy are still regarded as crucial concerns among various countries around the world, numerous governments, particularly those of European countries, have gradually minimised their subsidies to the solar energy industry, resulting in an overall reduction of prices. The gross margins of the industry, however, remain stable due to the decrease in costs, including the costs of raw materials and equipment. Such price adjustment have also helped the solar energy industry to gradually achieve grid parity, which will be beneficial to the widespread use of solar energy and the consolidation of the industry, thereby leading to sustainable development.

The solar energy industry in the United States has still experienced rapid development despite economic uncertainties. According to the statistics from the Solar Energy Industries Association, solar energy remains one of the fastest growing industries in the United States. Capitalising on the market demand and the reduction of costs for solar energy equipment and related factors, during the first quarter in 2011, the United States has added an installed capacity of 252MW to its power grids, representing a growth of 66% over the corresponding period in 2010 and, in aggregate, enabling an installed capacity for solar power generation within its power grid of over 2.85GW, which is sufficient for the provision of electricity for nearly 600,000 families. Although Section 1603 of the American Recovery and Reinvestment Act, should have been expired at the end of 2010, it has been extended to the end of 2011, demonstrating full support from the government of the United States to the development of the domestic solar energy industry, which in turn has motivated the development of the global solar energy industry.

As for the European markets, which are led by Germany and Italy, the feed-in tariff to the solar energy industry has been gradually reduced. Among those markets, Germany, being the world's largest solar energy market, is expected to further reduce the feed-in tariff as its market grows. According to a report prepared by the European Photovoltaic Industry Association, Europe is still playing a dominant role in the global photovoltaic markets with its 30GW installed capacity, which represents 75% of the total installed capacity of solar energy around the world. The solar photovoltaic industry in Europe is actively preparing to conduct industry-related research and development with a fund of EUR1.235 billion in the next three years. Members of the European Union have also undertaken that they will devote full support to the development of the solar energy industry, anticipating that the photovoltaic technologies, with the backup of the relevant capital, will contribute 12% of the power supply to the European Union by 2020.

Renewable energy in China continues its rapid development. After the nuclear plant crisis in Japan, countries around the world, including China, have re-examined their development plans for renewable energy. Since last year the Chinese government has launched a series of policies relating to solar energy, including a large-scale open tender for 13 solar power plants in the northwestern and Inner Mongolian regions in China, an allocation of RMB50 billion for the funding and support of energy conservation and emission reduction industries, which has resulted in China being ranked as one of the ten top photovoltaic markets in the world. At the National People's Congress held earlier this year, the Chinese government reiterated the strategic importance of renewable energies under the "Twelfth Five-Year Plan" and announced its plan to complete an additional installed capacity of 5GW before the end of the "Twelfth Five-Year Plan". It is expected that China will have a new installed capacity of 750MW to 1GW within this year, enabling the installed capacity of China to reach its first ever GW by 2011.

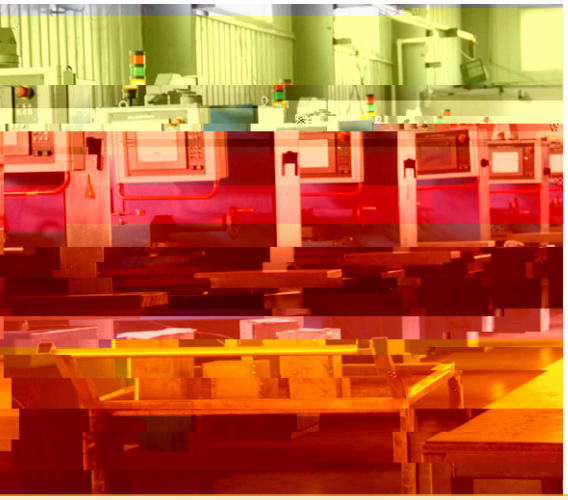
Operation Review

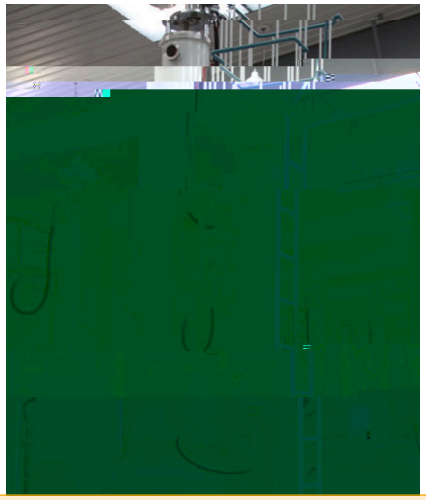
Actively expand overall capacity to strengthen market position

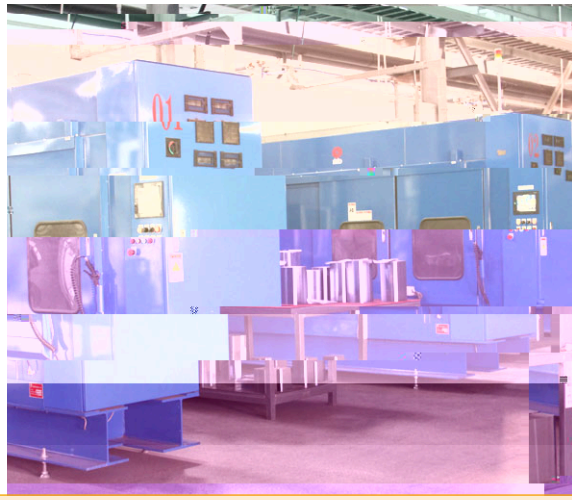
During the period under review, the economy of China has remained stable. However, the solar energy market has become more volatile in comparison to the previous year and there has been adjustment to demand, resulting in an overall drop in the prices of solar energy products. Prices within the industry have recorded a relatively significant decrease since April 2011, and have only until June commenced to regain stability. Despite the market fluctuation, the Group has continued to secure orders from customers by virtue of its quality products and technologies. Therefore, the Group has adhered to its expansion plan, capitalised on its advantages and further uplifted its production capacity in order to meet the huge amount of product shipment. As part of the plan, the Qinghai Plant (¡ @ Ò) was completed at the end of August and expected to gradually commence operations shortly thereafter, which will help the Group further consolidate its leading position in the market of the monocrystalline business.

As at 30 June 2011, the Group was equipped with 397 monocrystalline ingot pullers, 83 wiresaws, four multicrystalline casting furnaces, eight

nd erelatiness.
roup further consolin in the masharearke011, the Grces wit of







to approximately 217.67MW, representing an increase of 40.3% as compared to 155.15MW in the corresponding period last year. Since completion of the acquisition of the cells business at the beginning of the year, a portion of the silicon solar wafers manufactured was used in the production of solar t thee n69 3inning sold. The external shipment volume of the silicon solar wafers and the internal volume of the silicon sales wafers supplied to and required by the cell factories of the Group during the period under review were in aggregate approximately 169.80MW, representing a growth of total shipment volume of 63.2% compared to 104.07MW in the corresponding period last year. The external shipment volume of solar t the and the internal volume of the solar t the supplied to and required by the module factories was in aggregate 90.43MW. No solar t theewere produced 69 the corresponding period last year. Lastly, the shipment volume of solar modules was 15.67MW, representing a growth of total shipment volume of 129.8% compared to 6.82MW in the corresponding period last year.

Enlarging financing channeheeand promoting innovation and R&D

Facing huge demand from customers, the Group has been increasing its capacity. To ensure there is sufficient working capital 69 the on-going development of the business into the future, during the period under review, the Group has been actively exploring financing channehe. Leveraging on its good reputation, leading position, comprehensive plan aeewell aeesolid financial position, the Group has been highly recognised by the banke. On 27 May 2011, a syndicated loan with a facility amount of up to US$75,000,000 (approximately HK$581,250,000) 69 a period of three years was entered into between the Group and its bankers the Industrial Bank of Taiwan, BNP Paribaeeand other lendere. Subsequently, on 24 August 2011, the Group, with SinoPac Securities (Asia) Limited aee its manager successfully issued RMB300,000,000 Bonds with a period to maturity of three years.

In addition, in respect of the manufacturing of monocrystalline silicon solar ingots and wafers, the Group has achieved a leading position in China in terms of its technology, product quality and quantity. The products of the Group are the only monocrystalline silicon solar ingot made cell products in China for which national inspection has been waived. The photovoltaic conversion efficiency of its monocrystalline silicon products is also higher than the industry average. The N-series high-efficiency products of the Group have a photovoltaic conversion efficiency of 22-23%. Currently, the N-series products are mainly silicon solar ingots of 5.5 inches to 8 inches, with a small quantity of N-series silicon solar wafers available for sale, mainly targeted at Japanese customers. During the period under review, the shipment volume of N-series products was approximately 12.2MW, representing around 5.6% of total shipment volume. As for the photovoltaic modules, despite being a new entrant with current production capacity of only 100MW, the Group has had its products successfully admitted into the "Golden Sun Programme" (˜¢ ß) of China. An expansion of annual production capacity to 150MW has also been planned, targeting to export the products to the European and North American regions gradually.

Acquiring cells business to realise vertical integration

In the past, the businesses of the Group focused on the manufacture and sales of upstream silicon solar ingots and wafers. Subsequently, the Group started to develop the business of modules and system installations, by which allows the Group to formally enter the downstream sector of the industry. From silicon solar ingots to system installation, the solar cells business is the segment the Group has been missing from the entire solar energy value chain. Therefore, the acquisition of the solar cells business is a vital step for the Group to realise vertical integration in accordance to its business plan.

During the period under review, with the support of the shareholders, the Group successfully acquired Sino Light Investment Limited ("Sino Light") on 26 January 2011. Sino Light and its subsidiaries are primarily engaged in the manufacture of solar cells, with a current production capacity of 300MW. Through the acquisition of Sino Light, the upstream and downstream businesses of the Group are linked together, creating synergy. From the date of acquisition being 26 January 2011 to 30 June 2011, the production value of the external shipment volume of Sino Light's solar cells and the internal volume of Sino Light's cells supplied to and required by module factories was approximately RMB652.315 million, the quantity of solar cells for external shipment and the internal quantity supplied to and required by module factories, in which profit has been realised, was approximately 90.43MW. It contributed a segment profit of approximately RMB29.752 million, representing a significant percentage of 26.3%, compared to the profit of the Group of RMB113.333 million.

Establishing vertical integration business model and exploring downstream customers

Following a number of development projects undertaken in the recent years, the operations of the businesses of the Group including downstream solar cells, photovoltaic module and system installation have gradually been developed, thus successfully achieving vertically integration of the Group and further strengthening the leading position of the Group in the industry. As the downstream operations are gradually developed, the Group has obtained a number of key orders in China, including the 20MW on-grid photovoltaic power plant project in Golmud, Qinghai Province which was secured at the beginning of July 2011. The construction of the on-grid photovoltaic power plant will be completed by the end of September this year, and the actual on-grid feed in tariff of the project will be RMB1.15 per kWh. The construction of the 13.5MW "Golden Sun Programme" Project (˜ ¢ ß) in Liaoning Province, which was previously awarded to the Group, is expected to be completed within this year. A photovoltaic system programme of 33.5MW in aggregate is projected to be completed by the end of this year. Moreover, Jinzhou Jinmao Photovoltaic Technology Company Limited ("Jinzhou Jinmao"), a subsidiary of the Company has signed a purchase contract with ¡ » & j ƒ åe ï Þ" " fi ! ("Huanghe Hydropower"), under which, Jinzhou Jinmao has become one of the suppliers of photovoltaic modules for the 250MW on-grid photovoltaic power plant of Huanghe Hydropower in Golmud, Qinghai Province and is expected to provide photovoltaic modules, in aggregate, of approximately 19MW to Huanghe Hydropower from the third quarter in 2011 onwards.

The said on-grid photovoltaic system projects and the module sales contract, as well as the acquisition of Sino Light, a solar cell producer, completed at the beginning of the year, signifies the official completion of vertical integration of the Group. Therefore, the Group has achieved a leading position in the industry of manufacturing monocrystalline silicon solar ingots and wafers. The Group has correctly positioned itself in the areas of downstream modules and system power generation, all of which will in turn be beneficial to the healthy, long-term development of the Group.

Financial Review

Turnover

For the six months ended 30 June 2011, the turnover of the Group was RMB1,274.146 million, representing an increase of 60.0% compared with the corresponding period in 2010. During the period, with the enlarged production scale and recognised product quality of the Group from long-term customers, the demand for products of the Group continued to increase and turnover continued to rise.

Administrative expenses

Administrative expenses mainly comprised staff costs and research and development expenses. The administrative expenses for the first half of 2011 amounted to RMB137.781 million, increased by 224.2% as compared to RMB42.504 million of the corresponding period of 2010, representing 10.8% of the turnover of the Group. The increase in administrative expenses was mainly due to a significant increase in research and development expenses from RMB8.551 million in the first half of 2010 to RMB68.210 million in the first half of 2011, as the Company has rapidly expanded its production scale. In addition, the amortisation of intangible assets of RMB13.490 million during the first half of 2011 was due to the acquisition of the solar cell business in 2011 (the corresponding period in 2010: NIL).

Finance costs

The finance costs of the Group increased from RMB8.365 million for the six months ended 30 June 2010 to RMB19.114 million for the six months ended 30 June 2011. Finance costs represented mainly the interest on bank loans and the municipal loans. The increase in finance costs was due to the additional bank borrowings for business expansion and development.

Inventory turnover days

The inventories of the Group comprised mainly raw materials, namely polysilicon, crucibles and other auxiliary raw materials, and finished goods. By means of the expansion in capacity as well as the good relationship with its suppliers, the Group was able to increase its inventory of raw materials when market supply was short. During the period under review, the inventory turnover days of the Group were 102 days (the corresponding period in 2010: 129 days), and decreased by 27 days from the corresponding period in the previous year. The optimal inventory levels of the Group should be sufficient for approximately three months' consumption in the case of polysilicon and one month consumption for other auxiliary raw materials.

Trade receivable turnover days

For the first half of 2011, the trade receivable turnover days of the Group decreased to 38 days (the corresponding period in 2010: 50 days). The number of turnover days is at a low level, and is within the credit period granted to other customers by the Group. Generally, the Group allows a credit period of 30 to 90 days for its customers.

Trade payable turnover days

Due to the global supply for polysilicon raw materials being limited, and the consumption of polysilicon raw materials of the Group increasing, the percentage of prepayment for purchasing raw materials from the Group to the suppliers has increased. Accordingly, trade payable turnover days during the period under review decreased to 32 days (the corresponding period in 2010: 48 days).

Liquidity and financial resources

The principal sources of working capital of the Group during the period under review were cash flows from bank borrowings. As at 30 June 2011, the current ratio (current assets divided by current liabilities) of the Group was 1.44 (31 December 2010: 1.38). The Group had net borrowings of RMB1,001.340 million as at 30 June 2011 (31 December 2010: RMB202.259 million), including cash in bank and on hand of RMB679.355 million (31 December 2010: RMB459.734 million), pledged deposits of RMB135.808 million (31 December 2010: RMB74.113 million), bank loans due within one year of RMB942.374 million (31 December 2010: RMB648.011 million), non-current bank loans of RMB870.926 million (31 December 2010: RMB85.000 million) and non-current municipal loan of RMB3.203 million (31 December 2010: RMB3.095 million). Net debt to equity ratio (net debt divided by total equity) was 42.8% (31 December 2010: 12.3%). Such ratios show that the financial position of the Group has remained healthy.

Contingent liabilities

As at 30 June 2011, the Group had no contingent liabilities.

Foreign currency risk

The Group is exposed to foreign currency risk primarily through sales and purchases and cash and bank deposits that are denominated in a currency other than the functional currency, Renminbi, of the operations to which they relate. The currencies giving rise to this risk are primarily the US Dollar, Euro and Hong Kong Dollar. The Directors do not expect any significant impact from the change in exchange rates since the Group uses foreign currencies received from customers to settle the amounts due to suppliers. In addition, the Directors ensure that the net exposure is kept at an acceptable level by purchasing or selling the US Dollar and Euro at spot rates where necessary to address short-term imbalances.

Human resources

As at 30 June 2011, the Group had 3,548 (30 June 2010: 1,530) employees. The significant increase of employees was mainly due to preparation for the production scale capacity expansion in Jinzhou, Liaoning and Xining, Qinghai.

Being the leading enterprise focusing on solar energy in China, the Group will endeavour to make use of the following strategies so as to accelerate its future development:

Continuing capacity expansion to achieve economies of scale

Cost advantage is the key to success given the rigorous competition among solar energy enterprises. In view of the vast market demand and the intensified competition environment, the Group strives to reinforce its leading position as a manufacturer of monocrystalline silicon solar ingots and wafers, and to expand its capacity through organic growth and mergers and acquisitions, while proactively improving the operational efficiency of its own plants, so as to achieve economies of scale and in turn further enhance its cost advantage. At the end of August this year, the first phase of our new plant in Qinghai was officially established. It is anticipated that the commencement of operations will improve the Group's annual capacity of monocrystalline silicon solar ingots. Coupled with the original plan of capacity expansion and production enhancement of the Jinzhou Plant, it is expected that by the end of 2011, the annual

Strengthening relationship with long-term contract customers to stabilise income sources

權益披露

Share Option Scheme

The Company has conditionally approved and adopted the share option scheme on 27 February 2008 ("Share Option Scheme") in which certain participants may be granted options to subscribe for the ordinary shares

Share Option Scheme (Continued)

No share option was granted under the Share Option Scheme during the period under review.

Saved as otherwise disclosed, at no time during the period was the Company, or any of its holding company, subsidiaries or fellow subsidiaries a party to any arrangement to enable the Directors to acquire benefits by means of the acquisition of Shares in or debentures of the company or any other body corporate.

Notes to the Unaudited Interim Financial Report

3. Segment reporting (Continued)

In a manner consistent with the way in which information is reported internally to the Group's most senior executive management for the purposes of resources allocation and performance assessment, the Group has identified three reportable segments: (i) the manufacturing of, trading of and provision of processing services for polysilicon and monocrystalline and multicrystalline silicon solar ingots/wafers ("Segment A"); (ii) the manufacturing of and trading of photovoltaic modules and installation of photovoltaic systems ("Segment B"); and (iii) the manufacturing and trading of monocrystalline silicon solar cells ("Segment C"). Segment C became a reportable segment in 2011 after the acquisition of the Sino Light Investments Limited ("Sino Light") and its subsidiaries (collectively referred to as the "Sino Light Group") as disclosed in note 22. No operating segments have been aggregated to form these reportable segments. Comparative figures have been provided on a basis consistent with the current period segment analysis.

18. Interest-bearing bank loans

At 30 June 2011, the bank loans were repayable as follow:

19. Deferred income

Various government grants have been received by the Group for generating export sales, participating in high-tech industry and constructing various manufacturing plants in Jinzhou, Liaoning Province, the PRC. In addition, certain government grants have been received by the Group to compensate for its research and development expenses in relation to the manufacturing of monocrystalline silicon solar ingots and wafers and interest expenses for certain specific loans. Amounts of RMB7,399,000 (six months ended 30 June 2010: RMB4,547,000) have been recognised in the consolidated income statement for the six months ended 30 June 2011 (note 4).

The remaining unused balances as at the end of each reporting period are included in the consolidated statement of financial position as deferred income. There are no unfulfilled conditions or contingencies relating to these grants. Amounts of RMB196,484,000 (31 December 2010: RMB167,464,000) as at 30 June 2011 of deferred income will be recognised in profit or loss after more than one year.

20. Capital and reserves

		2010	
		No. of shares	Amount
At 1 January		1,807,170,425	162,458
Share issued upon conversion of convertible bonds (note 20(b))		–	–
At 30 June/31 December		1,807,170,425	162,458

20. Capital and reserves (Continued)

(b) Convertible bonds

As stated in note 22, on 26 January 2011, the Group acquired a 100% equity interest in Sino Light, satisfied by the issuance of zero-coupon convertible bonds of the Company with a principal amount of HK$835,200,000. The convertible bonds were interest-free and would be converted by the bondholders at a conversion price of HK$1.92 per ordinary share of the Company during the conversion period from 28 March 2011 to 26 January 2013. Upon conversion in full of the convertible bonds, an aggregate of 435,000,000 ordinary shares of the Company would be issued by the Company.

The number of shares into which the convertible bonds would be converted was fixed at the issuance date and the convertible bonds were interest-free and not redeemable in cash. The convertible bonds were classified entirely as equity of the Company and the fair value of RMB644,281,000 at the issuance date was recognised in equity in the other reserve.

The fair value of the convertible bonds was valued by the directors at the issuance date with reference to a valuation report issued by an independent professional valuer, Censere Holdings Limited. The estimate of the fair value of the convertible bonds was measured by applying the Binomial Option Pricing Model, with the following key assumptions:

Spot price at issuance date	HK$1.81
Option life	2 months
Expected volatility	33.44%
Risk-free interest rate	0.27%
Expected dividend yield from issuance date to commencement date of conversion period	0.00%

All of the convertible bonds were converted by the bondholders into ordinary shares of the Company on 21 June 2011. The nominal value of these shares of RMB36,127,000 was transferred from other reserve to share capital and the difference between the nominal value of these shares and the fair value of the convertible bonds, which amounted to RMB608,154,000, was transferred from other reserve to share premium.

21. 關連方交易

22. Business combination

(a) On 26 January 2011, the Group acquired 100% equity interest in Sino Light, satisfied by the issuance of zero-coupon convertible bonds of the Company which would be converted into 435,000,000 ordinary shares of the Company. The fair value of these convertible bonds on 26 January 2011 was HK$762,104,000 (equivalent to RMB644,281,000) (see note 20(b) for details). Sino Light and its subsidiaries (the "Sino Light Group") are engaged in the manufacturing and trading of monocrystalline silicon solar cells. The acquisition of the Sino Light Group allows the Group to expand into the downstream of the solar industry.

(b) The total turnover and net profit for the period contributed by the Sino Light Group for the period from its date of acquisition to 30 June 2011 were RMB226,370,000 and RMB29,752,000, respectively.

If this business combination had occurred on 1 January 2011, the Group's turnover and net profit for the period would have been approximately RMB1,312,649,000 and approximately RMB110,668,000, respectively. These amounts have been calculated by adopting the Group's accounting policies, eliminating the related intercompany transactions and adjusting the results of the relevant subsidiaries to reflect the additional amortisation and depreciation that would have been charged assuming the fair value adjustment to intangible assets, property, plant and equipment and lease prepayments have been applied from 1 January 2011, together with the consequential tax effects.
